

Fix Microsoft 365 Login

If you experience issues with your Microsoft 365 login like frequent requests to login again, the attached script may help.

1. Download the [OLicenseCleanup.zip](#) and extract it
2. Close your Microsoft 365 applications like Outlook, Teams or Office
3. Run the OLicenseCleanup.vbs VBScript file and ignore the other files

2. Wait three minutes (a black terminal window may flash shortly) and restart your PC

4. Now you need to login again without any issues
5. Let us know if you still experience any issues so that we may troubleshoot further
